

1 Global Event
Interrupt

Reforestation projects in the U.S., China, India, and Russia have significantly increase the planet's oxygen production capacity.

3 Water Event

Water jet technology advances. Recreational water vehicles now use less fuel.

2 Water Event

Interest groups donate money to build water treatment plants in many industrializing countries. The plants significantly lower the amount of pollution released into the water supply.

3 Air Event
Interrupt

Composite material technology advances. New jet engines are lighter and more fuel-efficient, reducing the amount of fuel needed by the air transportation industry.

S Special Event

Construction technology advances. New housing developments use living vegetation combined with solar panel technology to create efficient rooftops that generate electricity from the sun. You may swap one of your saved species with that of another player.

!! Water Event

The water requirements of the selected species are now closed. If this is the last set of requirements remaining on the species the species is saved. This card cannot be interrupted.

B Regular Block
Interrupt

Choose a target action event (red) to block, Normal Block blocks the effect of the targeted card. Normal Block counts as an action event.

A Discard

Choose a player other than yourself. That player must discard two cards, randomly chosen by you, to your hand. Discard down to the hand limit if necessary.

4 Land Event

A new international law passes. The law protects the world's current forestation percentage making destruction of any forests illegal.
